No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: 107196, 136
CURRENT PALLING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PAPLICATION NUMBER: US 60/074,788
PRIOR PAPLICATION NUMBER: US 60/094,190
PRIOR PLING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 1417
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .227 CAACTGCTGATGACCATGCATGAGCTGGAAGGTGATCCCTTCTTCGCCGACCCCGCGAA 1168

Sequence 1336, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: LyAN DOUGETE-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC-007

CURRENT APPLICATION NUMBER: US/09/134,001C

CURRENT FILING DATE: 1998-08-13

PRIOR PEDLICATION NUMBER: US 60/064,964

PRIOR PEDLICATION NUMBER: US 60/055,779

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3166730
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3166907
                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3172854
                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium thuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=6294328Bl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           81
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IleThrTyrAspGluLeuAsnAsnLeuIleArgAsnGlyLysIleAspThrValValLeu 22

                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel microorganisms (A), or their enzymatic extracts, able to convert isopropylamine (I) to L-alaminol (II) and which have the ipuH and ipuI genes, encoding enzymes involved in metabolism of (II), inactivated. (II) is an intermediate for pharmaceuticals, especially ofloxacin. Also the enzyme encoded by the bacterial ipuC gene (a gamma-glutamylamides ynthase) is used for synthesis of gamma-flutamylamides, specifically theanine. Inactivation of the ipuH and I genes improves production of (II). Typically, a Pseudomonas in which both culture. For a similar strain in which only the ipuI had been inactivated the maximum (II) concentration was about 7 mM, after 6 hour, falling to Pseudomonas putida KIE171-BII IpuC protein products (potential glutamine synthetase) which is described in the method of the invention.
                                                                                                                                        L-alaninol; isopropylamine; iupI; ipuH; ofloxacin; ipuC; glutamylamide;
gamma-glutamylamide synthase; theanine; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New microorganism for converting isopropylamine to L-alaninol, useful as pharmaceutical intermediate especially ofloxacin, has the ipuH and genes for alaninol catabolism inactivated -

This invention describes novel microorganisms (A), or their enzymatic extracts, able to convert isopropylamine (I) to L-alaninol (II) and which have the ipuH and ipuI genes, encoding enzymes involved in metabolism of (II), inactivated. (II) is an intermediate for pharmaceuticals, especially ofloxacin. Also the enzyme encoded by the bacterial ipuC gene (a gamma-glutamylamide synthase) is used for synthesis of gamma-glutamylamides specifically theanine. Inactivation of the ipuH and I genes improves production of (II). Typically, a Pseudomonas in which both ipuH and I genes were inactivated produced (II) at 8 mM after 60 hour culture. For a similar strain in which only the ipuI had been inactivated the maximum (II) concentration was about 7 mM, after 6 hour, falling to practically zero after about 20 hour. This sequence encodes the Pseudomonas putida IpuB, IpuE, IpuE, IpuG and IpuH
                                                                                                                                                                                                                New microorganism for converting isopropylamine to L-alaninol, useful as pharmaceutical intermediate especially ofloxacin, has the ipuH and genes for alaninol catabolism inactivated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein products which are described in the method of the invention

requences remassions represent una motecutes enconing and their associated DNA sequences immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and costeomyelitis), uvaltis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lessions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a text comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein cin the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAUS+556-AAUS+928 and AAUS+556-AAUS+556.

Copolypeptides shown in AAUS+56-AAUS+928 and AAUS+560-AAUS+556.

Contraction, but was obtained in electronic format directly from MIPO cat fitp.wipo.int/pub/published_pct_sequences.
